

Keryx

CITATION-TOLL INFRASTRUCTURE FOR AI AGENTS

Every citation *pays its creator.*

Keryx lets an agent discover, buy, verify and cite paid knowledge—then settle weighted USDC rewards to the creators it actually uses.

keryx.cc

USDC on Arc

Circle Gateway

AI consumes evidence at machine speed. Creators still monetize like every reader is human.

01

No programmable demand

Agents cannot cheaply buy one exact article, dataset fragment or claim.

02

Attribution is not payment

A link does not compensate the evidence that materially shaped an answer.

03

Agent spend is opaque

Without visible budgets and receipts, autonomous purchasing is hard to trust.

The opportunity: make *citation itself* the settlement event.

Question + budget → paid evidence → cited answer → creator rewards

ARCHIVED DISPATCH

How long do x402 payments take to finalize?

LOW CONFIDENCE — 1 sub-claim remain below the evidence threshold, 1 disagreement adjudicated

8/13/2026, 8:06:30 PM · llm:deepseek:deepseek-v4-flash + llm:mimo:mimo-v2.5 on 2 steps

The dispatch, *itemised*.

§ I THE DECISION

\$0.02 / \$0.04

50% \$0.02 under cap

§ III THE SETTLEMENT

WEIGHTED · USDC ON ARC

Stablecoin Ledger — Why USDC settles instantly onchain \$0.003 · EV 50%

Stablecoin Ledger covers USDC's instant settlement on L2s, directly addressing the finalization time subclaim about seconds on most implementations. It's cached and low-cost (0.003), with moderate reputation (4/100) and prior citations on this subject.

DECIDE Q SKIP

Agent Economy Weekly — x402 turns HTTP 402 into an agent payment rail \$0.004 · EV 60%

Agent Economy Weekly explains x402 as an agent payment rail, which is the core protocol. It's cached and offers high expected value for understanding x402's architecture and likely finalization mechanics. Reputation 13/100 with strong citation history. — the 4-source attention budget is full, so lower-ranked evidence is skipped.

DECIDE Q SKIP

The Coinbase Blog - Medium — Real-time reconciliation with Overseer \$0.003 · EV 40%

The Coinbase Blog article on real-time reconciliation with Overseer is about distributed systems synchronization, which could inform finalization timing concepts. Cached and low cost; reputation 0/100 but potentially useful. — cached bytes are free, but this read does not clear the attention gate (EV 0.40, minimum 0.45, with a required claim target).

DECIDE Q SKIP

Cointelegraph.com News — Russian president signs crypto law, core rules take effect in 2026 \$0.002 · EV 20%

Cointelegraph article is about Russia's crypto law, not about x402 finalization timing. Not cached, but high reputation (20/100) and strong citation history. However, topical mismatch makes it low-value for this specific query.

DECIDE Q SKIP

Decrypt — Putin Signs Russia's First Crypto Law: Trading Is Legal, Payments Stay Banned \$0.002 · EV 20%

Decrypt article is about Russia's crypto law, similar to Cointelegraph. Cached but off-topic for

App Kits

Unified Balance Kit publishes the treasury's chain-abstracted balance.

The screenshot shows the Keryx status page at keryx.cc/status. The page has a top navigation bar with links: ASK, LEDGER, PROOF, ARCHIVE, REGISTRY, MARKET, and buttons for 'ISSUE A TOLL' and 'WALLET'. Below the navigation bar is a status bar with various transaction types and amounts, such as 'DISPATCH WIRE +\$0.020', 'PAID @coindesk-bitcoin-eth +\$0.002', and 'PAID @cointelegraph-con-ne +\$0.002'. The main content area is titled 'SERVICE STATUS' and contains a box with the heading 'All systems operational'. This box lists system components and their status: Uptime (9h 34m), Datascore (ok), Settlement (real), Reasoning (deepseek), Network (arcTestnet), RPC provider (Canteen Arc RPC), and Commit (0072e6d). Below this, there are two sections: 'LIVE TRACTION' and 'AGENT OUTPUT ~ LAST 6H'. The 'LIVE TRACTION' section shows metrics like Settled payments (9,527), Creators earning (20), Independent paid (132), Settlement success (100%), and Creator payouts (\$39,2343). The 'AGENT OUTPUT ~ LAST 6H' section shows metrics like Dispatches settled (8), Dispatches that paid (7/8), Cross-provider saves (12), Model-reasoned (8/8), To creators (\$0.1100), and Provider failures (5 - 7 circuit skips).

REGISTRY PARITY

Settlement scale and independent usage, reported separately

Snapshot 2026-08-13 15:03:00 UTC · settled-only · pending and simulations excluded · first-party autonomous volume disclosed separately.

A two-sided market distributed through agent-native interfaces

Supply

Publishers and independent creators

RSS onboarding, exact article offers, creator-owned payout wallets, portable earnings proof.

Research and data providers

Paid APIs, premium evidence, benchmarks and proprietary corpora.

Demand

Agent developers

MCP, A2A x402, OpenAI-compatible API and public web app.

Research-heavy teams

Verifiable, budgeted answers with auditable source spend and payout provenance.

01

Creator case studies

02

Agent integrations

03

Arc/Circle ecosystem

04

Open-source SDK modules

Charge for orchestration. Keep creator rewards a pass-through pool.

DEVELOPER

Usage-based agent API

Platform fee for discovery, reasoning, policy and settlement operations. Source spend remains explicit.

ENTERPRISE

Integration + reliability plans

Private sources, controls, observability, compliance workflows and support.

CREATOR

Rewards stay creator-owned

Keryx currently takes 0% of citation rewards. Pricing tests will not blur source payouts.

Aligned incentives

Better evidence improves the answer, increases cited contribution, and directs more value to the creator who supplied it. Keryx earns by making that market reliable—not by hiding the toll.

Audit → cross-chain funding → external pilot → Arc mainnet

WEEKS 1–6

Independent security review

Close all critical/high findings; mainnet release candidate.

WEEKS 5–12

CCTP-funded sessions

Forwarding Service from Ethereum and Base.

WEEKS 9–18

External pilot

10 creator wallets; 5 agent integrations; public case studies.

WEEKS 16–24

Arc mainnet launch

Audited settlement, monitoring, recovery and SDK release.

GRANT ALLOCATION

45%	Engineering + Circle
20%	Security review
